Plan to produce the following deliverables. You will find resources in CougarView under Project Management, and online. Remember that YouTube is full of applicable videos!

Requirements:

1. Use-Case Documents - designed to identify the functional behavior of the system

2. Requirements Traceability Matrix (for later testing)

3. Requirements Specification document (see IEE 830 template)

4. Wireframes or non-functional mock-ups of your pages

5. Project plan

    a. For the project plan, use project management software. You can use MS Project (available on campus or as a free download from Dreamspark), or experiment with free online PM software:

    http://blog.capterra.com/free-open-source-project-management-software/

    b. Enter your list of tasks into your project plan. Use our semester dates as start and end dates for your project. Example: end date will be April 28, 2016.

Please include non-functional requirements, system constraints, and other pertinent information.
